

# DeRISK™ Platform

Industrial organizations carry significant OT cyber exposure — but have no systematic way to measure it, act on it, or move it off their books.

**Quantify. Reduce. Transfer.** — the operating model for industrial cyber risk.

## WHAT IT IS

### One operating model. Three products.

DeRISK™ translates OT cyber risk into a financial language that engineers, executives, and capital markets can all act on. Each product covers a defined move in the operating model — so your organization can quantify, reduce, and transfer risk with evidence at every step.

 <p><b>DeRISK™ CRQ</b> <b>QUANTIFY</b></p> <p>Know your exposure in dollars — by facility and across your portfolio. Annual Expected Loss and Value at Risk, grounded in your actual OT environment.</p>	 <p><b>DeRISK™ QVM</b> <b>REDUCE</b></p> <p>Prioritize what matters financially. Know which vulnerabilities to address first, ranked by what moves your financial risk — not a generic severity score.</p>	 <p><b>DeRISK™ UWA Agentic</b> <b>TRANSFER</b></p> <p>Move risk to the market with confidence. Structured submissions and binding-ready terms, produced by five specialist AI agents in minutes. GA May 2026.</p>

## HOW IT WORKS

- 1 Connect**  
 Your existing OT security platforms are the starting point. Assets, vulnerabilities, and controls flow in — no new sensors, no new deployments required.
- 2 Quantify**  
 See your Annual Expected Loss and worst-case exposure in dollars — by facility and across your portfolio. Numbers your board and CFO can act on immediately.
- 3 Reduce**  
 Model what changes before you commit budget. Identify which controls move the loss curve the most within your actual operational constraints.
- 4 Transfer**  
 Convert your risk posture into a structured market submission. Premium indication, binding conditions, and a full audit trail — ready in minutes, not weeks.

## FOR WHOM

-  **Industrials — Leadership**  
 CEO & Board · CFO. Cyber risk as a governance metric and a line on the balance sheet.
-  **Industrials — Operations**  
 CISO · COO. Prioritized action and continuity scenarios within real operational constraints.
-  **Risk Assumers**  
 Underwriter · Actuary · CUO. Structured evidence, actuarial output, accumulation visibility.

 **SOC 2 Type II · Certified**  
Independent attestation of security & controls

 **Data Encrypted**  
Anonymized at rest and in transit

 **Responsible AI**  
Explainable · audit trail · human in the loop
